

In a high-tech world, we have kept the environment in mind

As a responsible brand, Pudney Premium Gold® strives to create environmentally conscious products by incorporating environmental considerations into product and package design, right through to manufacturing. Pudney Premium Gold® products are innovative in reducing their impact on the environment.

- Cable design incorporates the use of TPR (Thermo Plastic Rubber), a harmless renewable resource, as opposed to PVC, which when melted down releases harmful chemicals
- Cable connectors are solder free, avoiding lead pollution from the solder
- Product packaging is made using PET (Polythylene Terephthalate) that can be recycled into fibres used in polyester fabrics

So when buying a home theatre system, maximise your audio and visual experience while protecting your environment with Pudney Premium Gold®.
